

ACTA UNIVERSITATIS STOCKHOLMIENSIS

Stockholm Studies in Educational Psychology 15

**SCHOOL ORGANIZATION
AND
STUDENT ACHIEVEMENT**

*A Study Based on
Achievement in Mathematics
in Twelve Countries*

BY

NEVILLE POSTLETHWAITE

ALMQVIST & WIKSELL

STOCKHOLM

CONTENTS

<i>Chapter 1. FRAME OF REFERENCE</i>	11
Retentivity	15
Differentiation	16
Specialization and Age of Entry to School	18
Summary	20
 <i>Chapter 2. IEA, POPULATIONS AND SAMPLING</i>	 23
International Project for the Evaluation of Educational Achievement	23
Populations Tested	26
Sampling	31
Sampling Units and Stratification	31
Weighting	34
Standard Errors	35
Summary	36
 <i>Chapter 3. INSTRUMENT CONSTRUCTION, DATA COLLECTION AND PROCESSING</i>	 39
Mathematics Tests	39
Questionnaires	44
Data Collection	46
Administration	46
Data Recording	48
Data Processing	49
Summary	50
 <i>Chapter 4. THE INVESTIGATIVE SITUATION</i>	 52
Structures	54
Attrition Rate	59
Specialization	62
Summary	63
 <i>Chapter 5. RETENTIVITY</i>	 65
Average Performance	69
Fixed International Standards Performance	71
Yield	78
Population 3 a	80
Populations 3 a and 3 b	80
Summary	88

<i>Chapter 6. DIFFERENTIATION</i>	90
Inter-School Differentiation	95
Intra-School Differentiation — Grade Repeating	99
Intra-School Differentiation — Ability Grouping	101
Implications	106
Summary	107
 <i>Chapter 7. SPECIALIZATION AND AGE OF ENTRY TO SCHOOL</i>	 110
Specialization	110
Age of Entry to School	113
Age of Entry and Social-Status Groups	118
Further Analyses Related to Age of Entry	120
Summary	125
 <i>Chapter 8. SUMMARY</i>	 128
 APPENDIX	 133
 REFERENCES	 144

TABLES

Chapter 2

2.1 Factors (a) by which corresponding s.r.s. estimate should be multiplied to give the complex standard errors and (b) complex standard errors for correlations	36
--	----

Chapter 3

3.1 Summary of content of tests for different populations	43
3.2 Reliabilities of the total mathematics score for populations 1 a, 1 b, 3 a and 3 b in each country	44

Chapter 4

4.1 1 b populations — designation of grades	58
4.2 School: median age of entry, mandatory minimum age of leaving and average age of completing pre-university year	59
4.3 Proportion of boys and girls of the total age group in school and by grade	60-61
4.4 Average number of subjects studied in last five grades of secondary academic schooling	63

Chapter 5

5.1	Indices of retentivity and comprehensive education	67
5.2	Total mathematics score, means, standard deviations and N's for populations 3 a and 3 b	69
5.3	Percentage of pre-university mathematics students reaching given standards	72
5.4	Percentage of age group reaching given standards (population 3 a)	74
5.5	Percentage of pre-university non-mathematics students reaching given standards (population 3 b)	76
5.6	Percentage of age group reaching given standards (population 3 b)	77
5.7	Total mathematics score and proportion of age group in school (populations 1 b, 3 a and 3b)	82
5.8	Correlations of tests 5 and 3 with total mathematics score for populations 3 a, 3 b and 1 b	83
5.9	Yield coefficients	85

Chapter 6

6.1	Means, standard deviations and N's of total mathematics score and standard deviations of age in months for population 1 b	94
6.2	Mean, standard deviations and N's of total mathematics score and standard deviations of age in months for population 1 a	100
6.3	Indices of extent of ability grouping practised (populations 1 a and 1 b)	102
6.4	Standard deviations, measures of ability grouping and grade repeating, and mean mathematics scores (population 1 a)	104
6.5	Product moment correlation matrix of table 6.4	104
6.6	r, b and rb 100 of table 6.5	104
6.7	Standard deviations, measures of ability grouping and grade repeating, and mean mathematics scores (population 1 b)	105
6.8	Product moment correlation matrix of table 6.7	105
6.9	r, b and rb 100 of table 6.8	106

Chapter 7

7.1	Number of subjects studied and mean score by country	112
7.2	Mean ages and standard deviations of age for populations 1 a and 1 b	116
7.3	Mean scores and standard deviations of scores in mathematics for different ages of entry	117
7.4	Differences between mean scores of groups with different ages of entry (populations 1 a and 1 b)	117
7.5	Mean score in mathematics by social status group (population 1 a)	119
7.6	Differences between mean scores in table 7.5 (population 1 a)	119
7.7	Mean mathematics score and measures of various independent variables (population 1 a)	121
7.8	Product moment correlation matrix of table 7.7	122

7.9	r, b and rb 100 of table 7.8	122
7.10	Mean mathematics score and measures of pre-service training, opportunity to learn, interest and hours school per week (population 1 a)	123
7.11	Product moment correlation matrix of table 7.9	124
7.12	r, b and rb 100 of table 7.10	124

FIGURES

Chapter 4

4.1	Australia – School System	53
4.2	Belgium – School System	53
4.3	England – School System	54
4.4	Finland – School System	54
4.5	Federal Republic of Germany – School System	55
4.6	Japan – School System	55
4.7	Netherlands – School System	56
4.8	Scotland – School System	56
4.9	Sweden – School System	57
4.10	United States – School System	57

Chapter 5

5.1	Relation of Mean Mathematics Score to Percentage of Age Group in Population by Country (Population 3 a)	70
5.2	Relation of Mean Mathematics Score to Percentage of Age Group in population by Country (Population 3 b)	71
5.3	Cumulative Percentile Frequencies (Smoothed) for Population 3 a	81
5.4	Combined Yield (3 a + 3 b on 1 b)–Based on Scaled Means	84

Chapter 6

6.1	Standard Deviations of Mathematics Scores for 1 b Populations	96
-----	---	----

APPENDIX

A.1	Participants in IEA	135
A.2	Summary of Topics for Populations 1 a and 1 b	136
A.3	Summary of Topics for Population 3	138
A.4	Regression Scaling of 1 b and 3 a onto 3 b Scale	139
A.5	Indices of Social Bias	139
A.6	Means, Standard Deviations and N's for Total Mathematics Score, Lower Mental Process and Higher Mental Process by Sub-Sample (Population 1 b)	140
A.7	Means, Standard Deviations and N's for Total Mathematics Score, Lower Mental Process and Higher Mental Process by Sub-Sample (Population 1 a)	142
